

EMERGING TECHNOLOGY IN INDIA

GROUP-3

Presented By-

Sunil Choudhary M14

Ese Khan M19

Mohit Singhal M24

Praveen Oswal M29

Shailendra Meena M34

EMERGING TECHNOLOGIES

- ▶ Internet of Things and 5G
- ▶ 3D Printing
- ▶ Artificial Intelligence
- ▶ Block chain

Internet of Things

- The Internet of things (IoT) is a network of physical objects – devices, vehicles, appliances – embedded with sensors, software, network connectivity, and computing capability enabling them to collect, exchange, and act on data

Internet of Things

Advantages

- Helps people live and work smarter, as well as gain complete control over their lives.
- IoT enables companies to automate processes and reduce labour costs, reduce wastage and overall leading to reduce in cost of manufacturing or delivering any service or product

Risk/Challenges

- As flow of information increased data theft and privacy Issue increases
- If there's a bug in the system, it's likely that every connected device will become corrupted
- It will enhances requirement of energy, semiconductors

5G

- 5G enables a new kind of network that is designed to connect virtually everyone and everything together including machines, objects, and devices
- Features:
 - 1) Higher multi Gbps peak data speeds
 - 2) Ultra Low latency, greater bandwidth
 - 3) Increased Capacity and Reliability
 - 4) Higher performance and improved efficiency

3D PRINTING TECHNOLOGY

❖ *INTRODUCTION*

- 3D Printing or Additive Manufacturing

❖ *General Principle*

- Modelling
- Printing
- Finishing

Types of 3D Printing

- A. Nozal Based Deposition System
- B. Laser Based Writing System

3D Printing Material

- ▶ Metals like Steel, Aluminium, Silver etc
- ▶ Plastics & Resin of different types

Applications of 3D Printing

Medical/Dental
Printing Prosthetic parts, organs, medical models, synthetic skin

Medical/Dental

3D Printing

Automobile

Automobile

Printing Automotive prototypes, car parts and accessories

Aviation

Aviation

Printing Aircraft parts like wings and engines, rocket engine parts

Architecture

Architecture

Detailed architectural models in an array of materials

Electronics

Electronics

Printing jigs, fixtures, gauges, patterns, molds, and dies

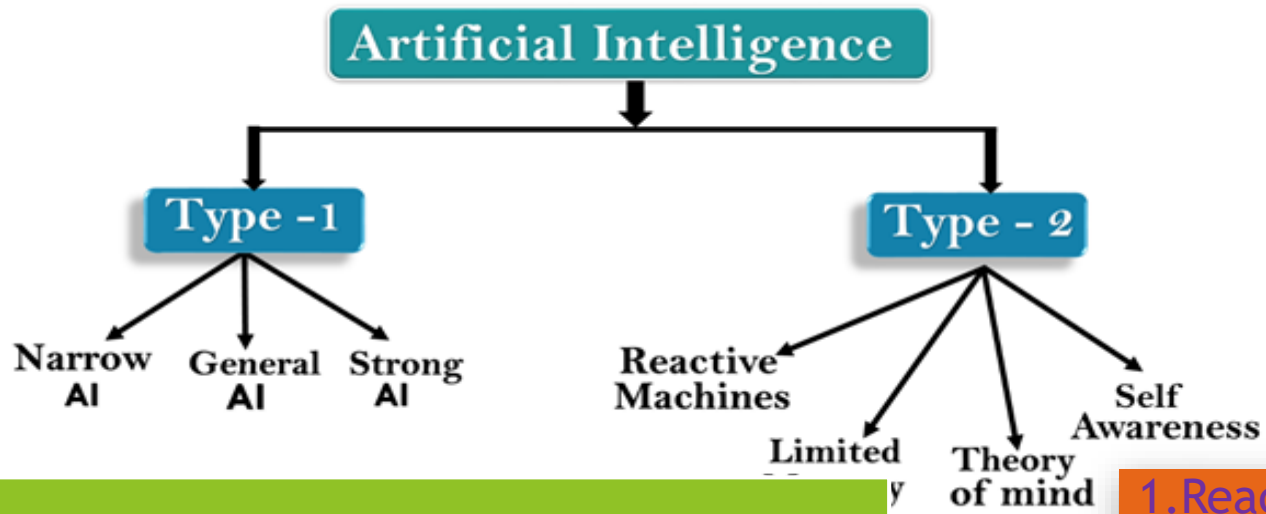

WHAT IS ARTIFICIAL INTELLIGENCE (AI)

- An intelligent entity created by humans.
- Capable of performing tasks intelligently without being explicitly instructed.
- Capable of thinking and acting rationally and humanely.

EXAMPLES OF ARTIFICIAL INTELLIGENCE?

1. Siri, Alexa and other smart assistants
2. Self-driving cars
3. Robo-advisors
4. Conversational bots
5. Email spam filters
6. Netflix's recommendations

1. Narrow AI- System designed for one specific task and whose capabilities are not easily transferable to other systems

2. General AI- Machine with human level or higher intelligence capable of abstracting concepts from limited experience and transferring knowledge between domains.

3. Super AI- This is where machines become self aware and surpass the capacity of human intelligence and ability

1. Reactive machine- Very limited capability that just produce an output based on input memory and no learning.

2. Limited memory - machines that are capable of learning from historical data and make better predictions .most current application falls into this category.

3. Theory of mind - machines that begin to interact with thoughts and emotions of humans. This is at conceptual stage and work in progress as we speak.

4. Self aware- the final stage of AI that has evolved to be human like with independent intelligence. we are far from this.

How does AI works

- AI systems work by combining large sets of data with intelligent, iterative processing algorithms to learn from patterns and features in the data that they analyze.
- Each time an AI system runs a round of data processing, it tests and measures its own performance and develops additional expertise.

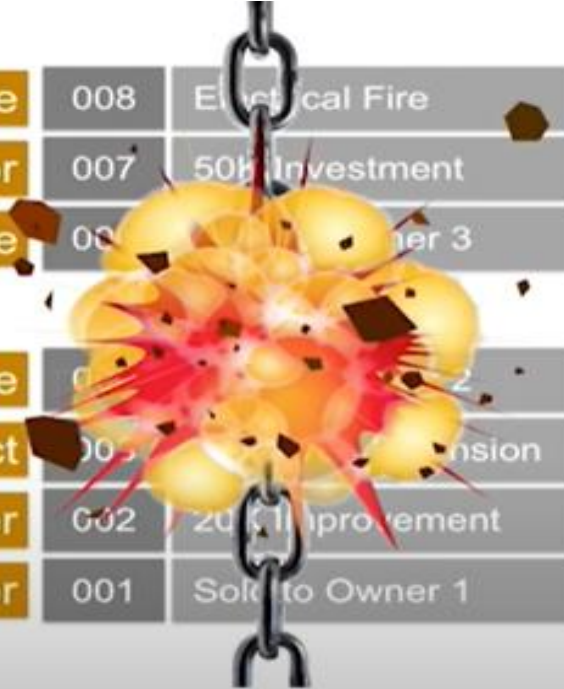

USE OF ARTIFICIAL INTELLIGENCE

Block Chain Technology Applications

► Property registration:

Insurance	008	Electrical Fire	2001	Key icon
Contractor	007	50k Investment	1993	Key icon
Real Estate	005	Owner 3	1992	Key icon
Real Estate	004	Owner 2	1989	Key icon
Architect	003	Extension	1980	Key icon

Builder	001	Sold to Owner 1	1976	Key icon

Blockchain Ledger

IMMUTABLE

Block Chain Technology

Block Chain Technology

Tamper-able + Centralized

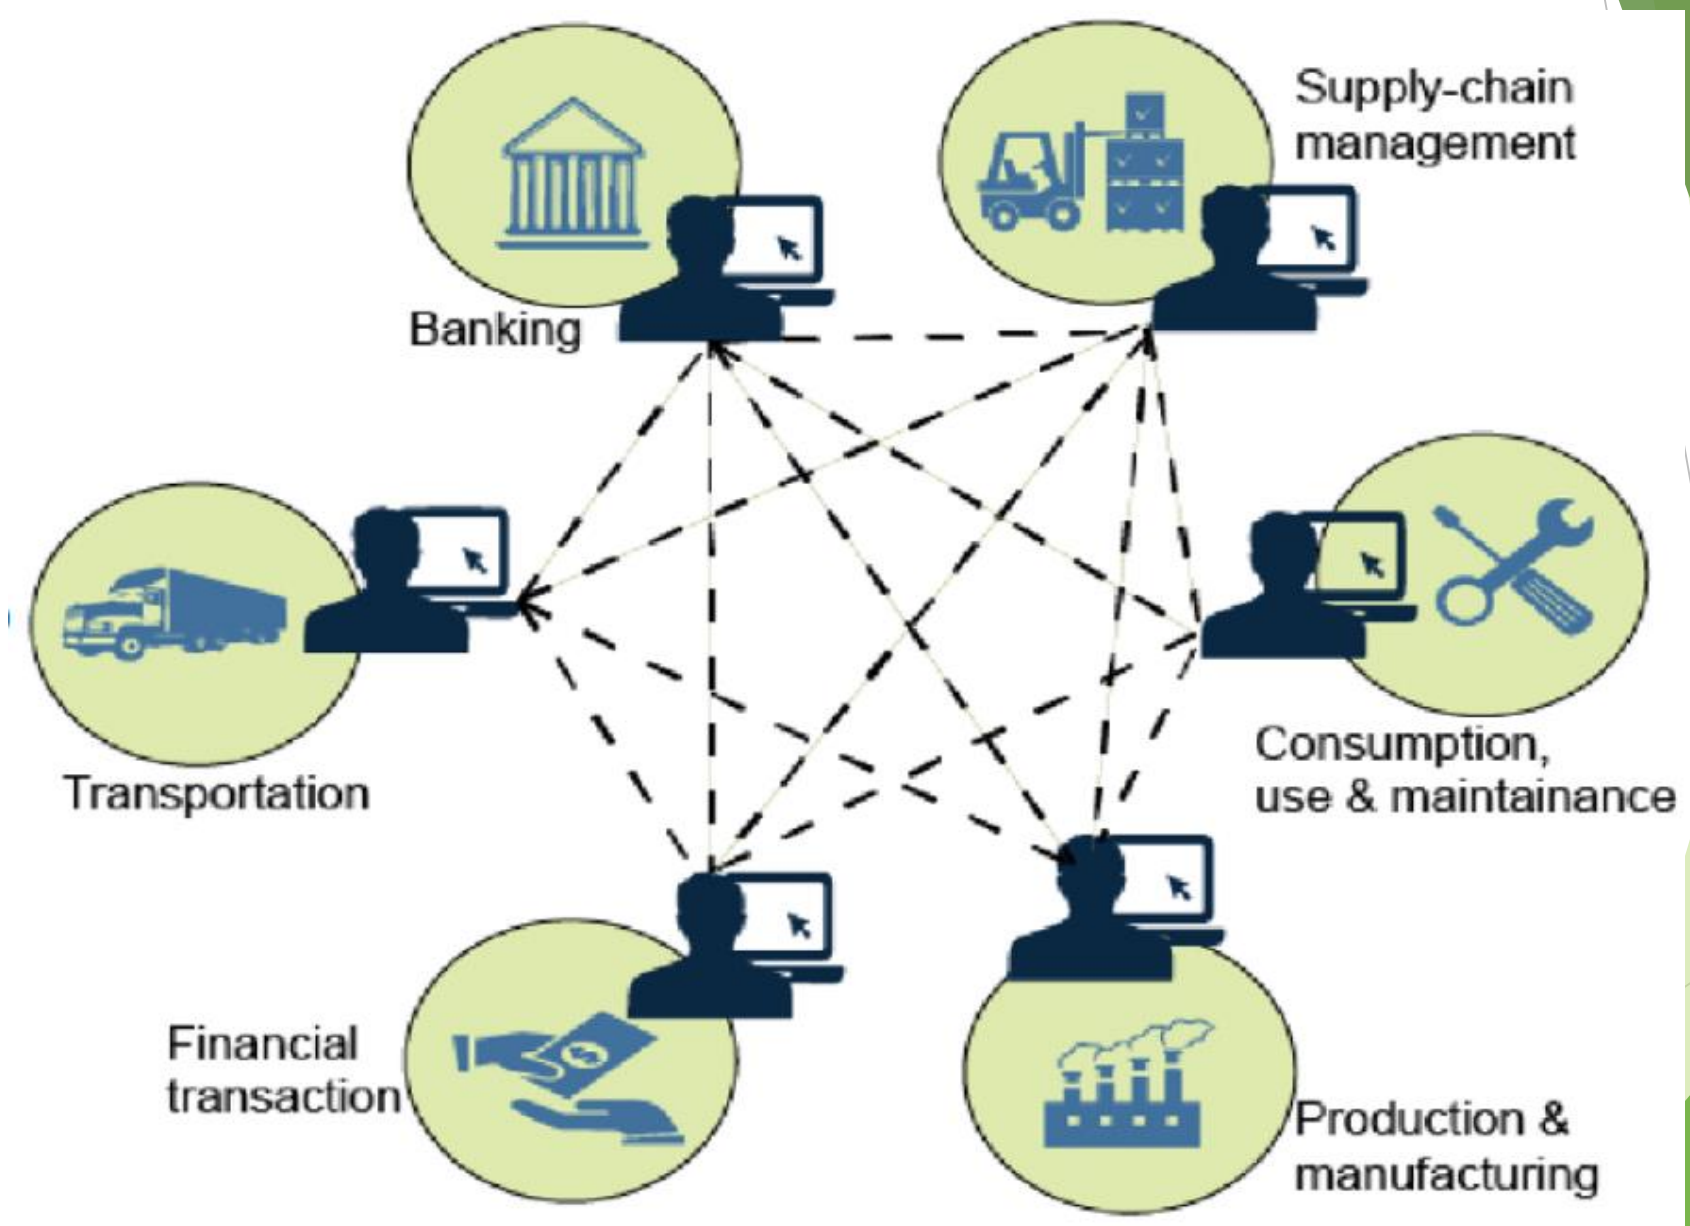

Trust but verify,
requiring slow
intermediaries

VS

Immutable + Distributed

Trusted, immediately
recorded and easily
available

Blockchain For Government

Shared service
models

Secure
Data Entry

Customs

Digital Currencies

Transparent
Budget

Paper-based
system substitute

Voting

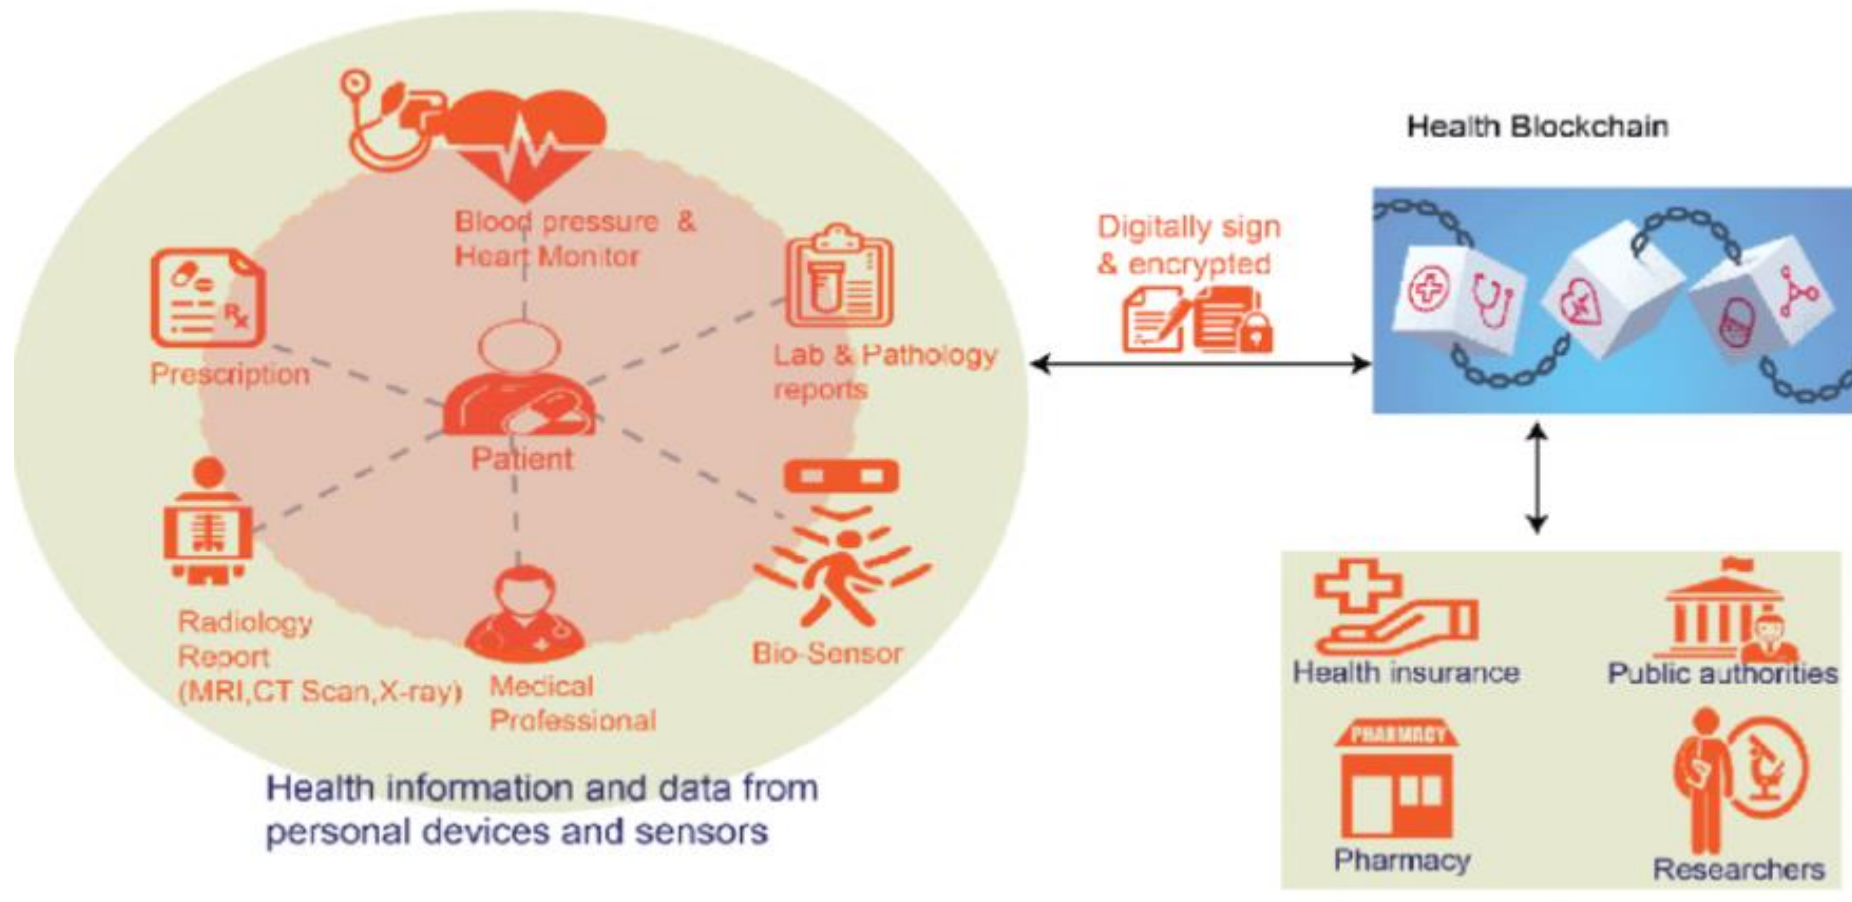

Combating
Corruption

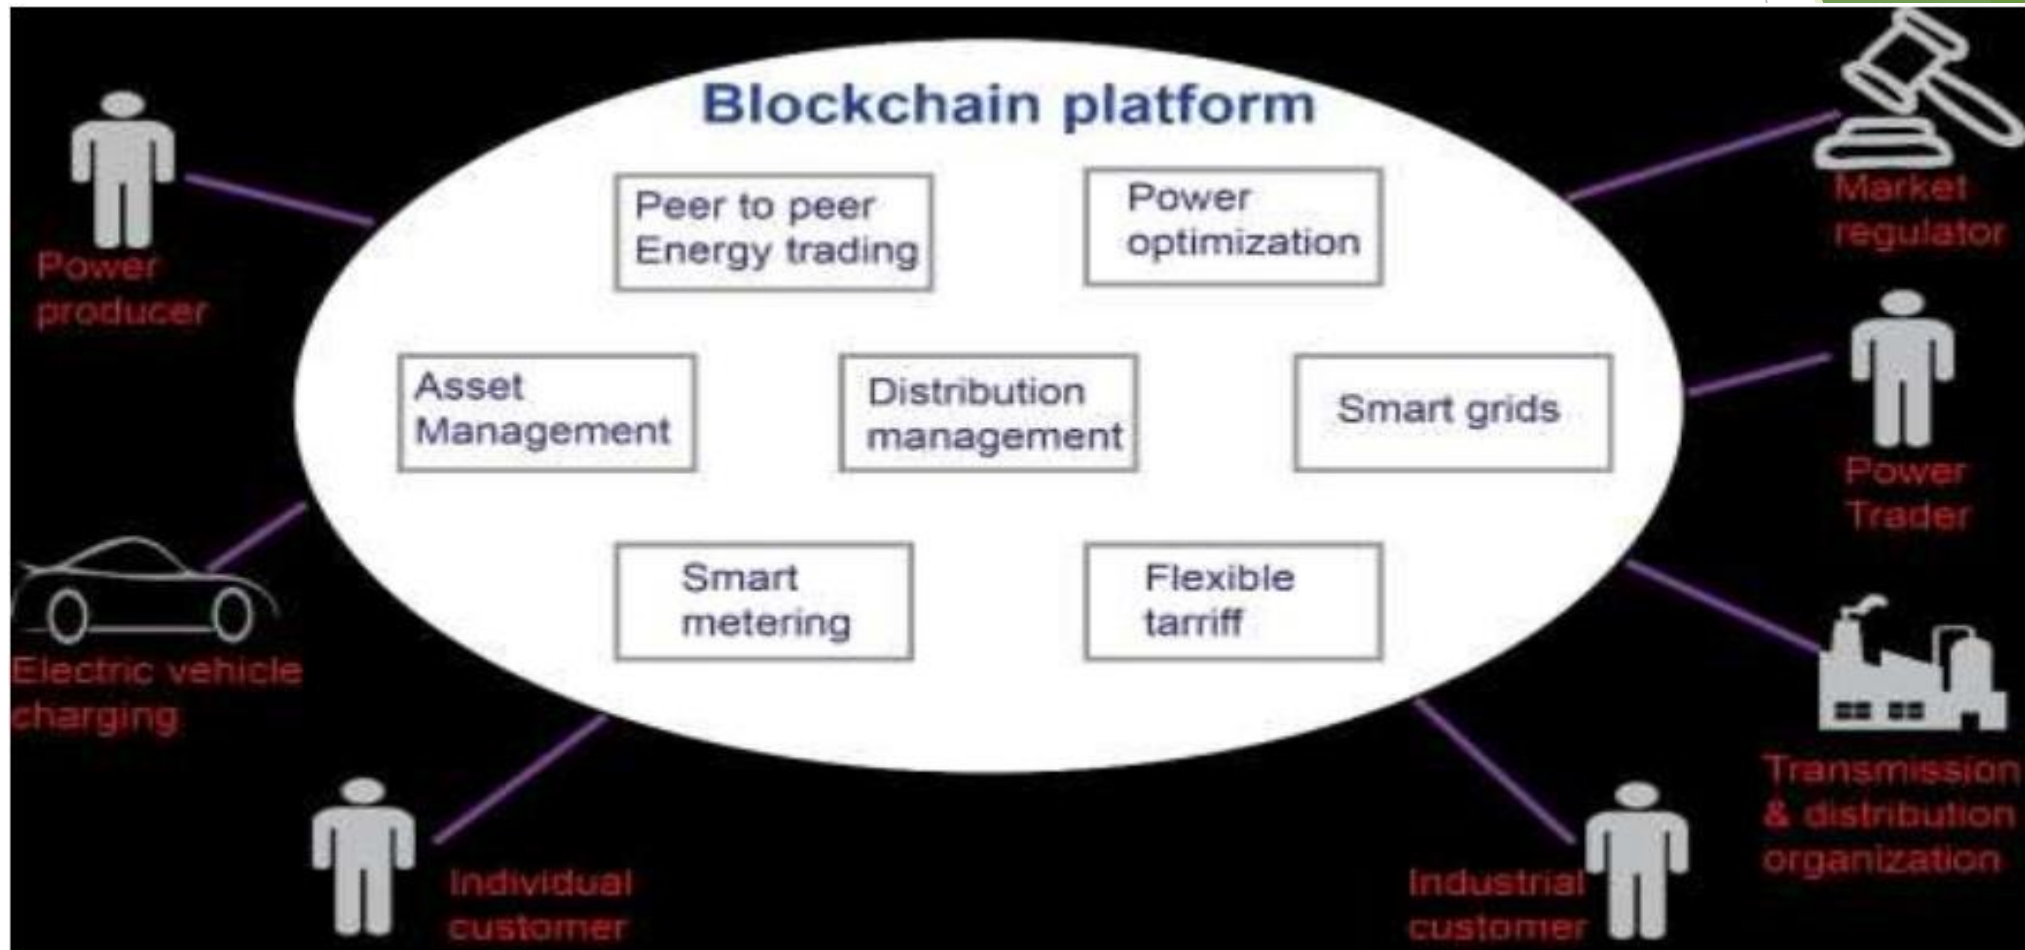

Data
management

Block Chain Technology- health Sector

Block Chain Technology- energy sector

Block Chain Technology- Govs In India

STATE	PROJECT	STATUS
TELANGANA	LAND REGISTRATION	POC completed
	DATA PROTECTION	POC completed
ANDHRA PRADESH	LAND RECORDS	Completed experiment at Amaravati. Further implementation across state being explored.
	EDUCATIONAL CERTIFICATES	RFP issued. Full deployment by end of the year.
	ROAD TRANSPORT LICENSE	RFP issued. Full deployment by end of the year.
	KYC FOR HOTEL RECORDS	
MAHARASHTRA	LAND RECORDS	POC ongoing
KARNATAKA	IP MANAGEMENT	POC to begin later this year
GOA	LAND REGISTRY	Exploring the feasibility
UTTAR PRADESH	LAND AND REVENUE RECORDS	Announced
GUJARAT	E-GOVERNANCE	Announced

**THANK
YOU**
